

Customer Journey Map

Date	27 June 2026
Team ID	XXXXXX
Project Name	Emotion Detection & Learning Support Engine
Maximum Marks	2 Marks

Customer Journey Map:

A **Customer Journey Map** is a visual representation of the steps a user follows while interacting with a product or service. It helps identify the user's actions, thoughts, emotions, touchpoints, and overall experience at each stage of their journey. By understanding these interactions, developers can improve usability, increase user satisfaction, and build more user-centric solutions.

Customer Journey Map for Emotion Detection & Learning Support Engine:

The **Customer Journey Map** for the **Emotion Detection & Learning Support Engine** illustrates the complete journey of a user, beginning with accessing the application, entering text about their feelings or learning challenges, and receiving an emotion prediction through the BERT-based model. Based on the detected emotion, the system provides personalized learning recommendations and AI-powered guidance using the Gemini API. The map highlights the user's interactions, expectations, emotions, and concerns throughout the process, helping to create an intelligent, supportive, and user-friendly learning platform that enhances emotional well-being and improves the overall learning experience.

Example:

Phase of Journey	Stage 1 Input User provides input	Stage 2 Emotion Detection System detects emotion	Stage 3 Learning Support Provides personalized support	Stage 4 Result & Suggestions Displays results & resources	Stage 5 Next Steps Improves & continues learning
Actions What does the user do?	- Types text describing feelings or learning experience - Asks a question for support - Submits the input	- System preprocesses the text - BERT model analyzes the input - Predicts the emotion with confidence score	- System selects suitable learning resources based on emotion - Gemini AI generates personalized guidance and support	- Displays detected emotion - Shows confidence score - Displays learning recommendations - Provides AI-generated response	- User reads suggestions - Can ask follow-up questions - System learns and improves future recommendations
Touchpoint Where does the user interact?	- Streamlit Web Interface (Text Input Box) - Example Prompts - Upload (if any future input type)	- Backend (Python) - Preprocessing Module - Fine-tuned BERT Model	- Recommendation Engine - Resource Database - Gemini API Integration	- Results Page - Emotion Display Section - Recommendations Section - Chatbot Response Area	- Chatbot Interface - Feedback / Follow-up Section - Save / Download Resources (future enhancement)
Customer Thought What is the user thinking?	- Will the system understand how I feel? - Can I trust this platform? - Is my input safe?	- How is my emotion detected? - Is the prediction accurate? - What does this emotion mean?	- Will I get useful learning resources? - Can this help me feel better and learn effectively?	- What is my emotion? - Why was this emotion detected? - What should I do next?	- What more can I learn? - How can I improve myself? - Can I track my progress?
Customer Feeling What is the user feeling?	- Curious - Hopeful - Slightly unsure	- Anxious - Expectant - Interested	- Relieved - Supported - Encouraged	- Satisfied (if results are useful) - Motivated - Understood	- Empowered - Confident - Optimistic
Process Ownership Who is responsible for this stage?	- Frontend Developer - UI/UX Designer	- NLP Engineer - ML Engineer	- Backend Developer - AI Integration Engineer	- Backend Developer - Frontend Developer	- Product Owner - ML & Data Team
Opportunities How can we improve this stage?	- Add voice input option - Provide example sentences - Improve UI for better user experience	- Improve model accuracy - Support multi-language - Reduce prediction time	- Expand resource library - Add learning path recommendation - Personalize content more deeply	- Add visualization for emotion trends - Allow user feedback on results - Add share / download option	- Track learning progress - Add reminders & suggestions - Implement user profiles (future)
